

## MARINE

**Nobody wants to be enjoying a day at sea off the east coast of Australia and have the engines fail due to dirty Diesel Fuel!!**

Ensuring clean and dry Diesel Fuel on a Marina can be difficult and at times critical. Diesel Now P/L have released a new **multi-function Portable Filter system, PF-3**, which is ideal for servicing the Marine Industry and most types of larger Cruisers.

On a typical Marina, there are several applications where the PF-3 would be effective and very economical.

- The PF-3 can be used by the Marina Manager to regularly recycle the stored Diesel Fuel in the bulk Supply Tanks, ensuring that it is always clean, dry and ready to use.
- The PF-3 can also be used by the Marina Manager to service vessels in their care.
- The PF-3 can also be hired out to individual boat owners to clean their diesel themselves.

Almost every vessel is different and access to the Diesel Fuel Tanks can be challenging.

## **DN adopts a "four step" approach to maintaining Stored Diesel Fuel**

### **PREPARATION**

**1. Assess** - Determine the type and amount of contamination that is present in your Diesel Fuel. We can collect accurate samples from the very bottom of your Bulk Tank (<10mm) that can be visually assessed or sent to an independent analytical laboratory for analyses.

**2. Filter** - Remove and dispose of the bulk contaminants, including condensed water; settled sludge; biological gels and growth; rust; silt,; etc.

**3. Purify - Filter (Polish) the diesel fuel** to remove very fine particles and water until it is of optimum quality - clear, clean and safe to use.

### **MAINTAIN**

**4. Maintain the optimum quality** by gently recycling the diesel fuel, on a regular basis, with an automatic, programmable system with sensors and alarms that alert you to any aspect that may need attention.

Steps 1, 2, and 3 can be applied to most Marine applications by including a Bacon Bomb Sampler (BB-4) with the basic Portable Filter (PF-3).

**Starter Kits are priced from as little as \$5,500, plus GST.**

## **Onboard "Fuel Filter-Water Separators"**

Diesel Now also supply the Raycor P510 MAM Diesel Fuel Polisher - for fitting onto the Diesel Fuel Tank(s) in larger vessels. Starting at A\$1,300, plus GST these are a very economical way to be sure that your diesel fuel stays relatively clean, at all times.
